

## Control: No uncertainty

There is speculation that regularly sanitizing mobile phones can reduce the number of illnesses acquired. However, based on current evidence, public health officials do not recommend that people sanitize their mobile phones daily.

.....  
Uncertainty: this  
was conducted on a  
**different**  
population  
.....

## Treatment: Uncertainty

There is speculation that regularly sanitizing mobile phones can reduce the number of illnesses acquired. *A study tested whether sanitizing phones yielded a significant difference in the number of illnesses acquired. The study did not find that sanitizing phones made a difference. The study was performed only on landline phones.* Based on current evidence, public health officials do not recommend that people sanitize their mobile phones daily.

## Second Statement: New evidence + New advice

**Additional testing was done** on mobile phone sanitization, and found there were significantly fewer illnesses acquired among people who sanitized their **mobile phones** compared to those who did not. **Based on this new evidence**, public health officials recommend that people sanitize their mobile phones daily.
