

Control: No uncertainty

There is speculation that regularly sanitizing mobile phones can reduce the number of illnesses acquired. However, based on current evidence, public health officials do not recommend that people sanitize their mobile phones daily.

The results were
based on a study

Treatment: Uncertainty

There is speculation that regularly sanitizing mobile phones can reduce the number of illnesses acquired. A study tested whether sanitizing phones yielded a significant difference in the number of illnesses acquired. The study did not find that sanitizing phones made a difference. The study was performed only on landline phones. Based on current evidence, public health officials do not recommend that people sanitize their mobile phones daily.

Control: No uncertainty
